

Continuum Shelter

- **Modern design**
- **Galvanised frame**
- **Deckwood quality spotted gum used**
- **Designed for Durability and Low Maintenance**

Outdoor structures Australia specialises in the supply of high quality weather exposed timber and timber and steel structures to local and state governments as well as residential developments and other public infrastructure. Our Continuum range of shelters along with our Paragon shelter complement our range of traditional styled shelters, the Hume, Gregory and Lindsay

Our Continuum shelters not only look superb on completion but remain that way for many years because of the close attention given to our detailing and material used. The Deckwood grade spotted gum pre-oiled with Tanacoat complements the galvanised frame. The shelter incorporates a standard Flinders seat at 2.5m long.

If you require more information than contained in this brochure, contact our office

The normal Continuum shelter is supplied with a deep footing but where that might conflict with services a shallow footing option is available. The kit is supplied as

- All steel, timber and hardware
- Timber docked to length
- Timber pre-oiled
- Installation can be arranged through ap-

Note: The Continuum shelter is now sold as drawings only.
